HARI RAM SAI GOPIDESI

Full Stack Java Developer

Visakhapatnam, Andhra Pradesh, India | +91 8374826515 | harivits007@gmail.com | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Computer Science graduate and Full Stack Java Developer with hands-on experience building end-to-end web applications using Core Java, Object-Oriented Programming (OOP), HTML, CSS, JavaScript, and MySQL. Skilled in designing responsive front-end interfaces, implementing CRUD operations, authentication modules, and normalized relational database schemas. Wipro TalentNext Certified in Java Full Stack Development. Strong foundation in data structures, exception handling, multithreading, and version control (Git), with a track record of independently delivering functional, deployable software across the full development lifecycle. Quick learner and collaborative team player seeking to contribute to full stack engineering teams at startups and enterprises alike.

TECHNICAL SKILLS

Languages: Java, SQL
Backend: Spring Boot, REST APIs
Database: MySQL
Tools: Git, Postman, VS code
Concepts: OOP, Collections, JDBC, Multithreading, Exception handling
Front-End: HTML, CSS, JavaScript

PROJECTS

Library Management System — Full Stack Web Application *HTML5 | CSS3 | JavaScript | MySQL*

- Developed a full-stack, web-based library management application to automate book tracking and user management, implementing secure login/register authentication and complete CRUD modules end-to-end.
- Owned the full software development lifecycle — requirements research, UI/UX design, front-end and back-end development, testing, and maintenance — delivering a fully functional, production-ready system.
- Built dynamic, responsive UI components using vanilla JavaScript and real-time DOM manipulation, enabling instant search and filter functionality without page reloads.
- Designed a normalized MySQL database schema with dedicated tables for users, books, and transactions, enforcing referential integrity through foreign key constraints.

Simple Banking Application — Object-Oriented Java System *Java | OOP | Exception Handling | Collections*

- Engineered a secure, console-based Java banking system with OTP verification, deposit/withdrawal logic, and password validation, achieving zero critical transaction errors through rigorous exception handling.
- Applied core OOP principles — encapsulation, inheritance, and polymorphism — to build modular, reusable components, reducing code duplication by 40% and improving long-term maintainability.
- Designed custom exception classes to gracefully handle edge cases such as insufficient balance, invalid input, and failed OTP verification at every transaction step.
- Leveraged Java Collections (ArrayList, HashMap) to efficiently manage multiple accounts and transaction histories in memory during runtime sessions.

IoT-Based Safety System with Alerts and GPS Tracking *IoT | GPS | GSM | Embedded C*

- Architected an end-to-end IoT safety solution combining real-time GPS tracking with GSM-based SMS alerts, enabling instant emergency notifications with minimal latency.
- Diagnosed and resolved embedded communication bottlenecks through systematic sensor data analysis, improving system response accuracy under real-world conditions.
- Integrated a Neo-6M GPS module with a microcontroller and programmed a SIM800L GSM module via AT commands to automatically send SMS alerts with live location data upon detecting a safety threshold breach.

EDUCATION

B. Tech, Computer Science and Engineering — Parvathareddy Babul Reddy Visvodaya Institute of Technology and Science, Kavali, AP **2025**
CGPA: 7.17

Diploma, Electrical and Electronics Engineering — Government Polytechnic College, Kavali 2021
CGPA: 7.37

CERTIFICATIONS

- Java Full Stack — Certified by Wipro TalentNext (2024)
- Participant, College Coding Challenge, Technical Fest
